THE MINI GUIDE · NO FLUFF, JUST STEPS

Get cited by *AI* *answers*

Seven free workflows with Claude to see who ChatGPT, Perplexity, Gemini and Google AI Mode name, and fix your pages.

Seven free-tool workflows with Claude to find out who AI names, and fix your pages.

1

STEP 1 · TRACK THE QUESTIONS

Log who gets cited for *real* questions

Ask Claude for 30 questions a buyer would type. Run ten by hand in ChatGPT, Perplexity, Gemini and AI Mode. Log whether you are linked, named only, or absent.

Citation log (example)

QUESTION	WHERE	RESULT
Q1 best X for Y	Assistant A	e.g. Linked
Q2 X vs Z	Assistant B	e.g. Named only
Q3 cost of X	Assistant C	e.g. Absent

COPY THIS PROMPT

Claude

```
I run [business] in [market] for [customers]. Write 30
questions a real buyer would type into an AI
assistant: what is it, how to choose, X versus Y,
cost, where to buy. Natural wording, no keywords.
Table: ID, Question, Stage.
```

2

STEP 2 · FIND QUIET PAGES

Find pages with clicks but *no citations*

Export pages from Search Console, Google's generative AI report and Bing AI Performance. Claude matches the URLs and lists pages with clicks but few or no AI impressions or citations.

Page match (example)

PAGE	CLICKS	AI
/guide-a	e.g. 420	e.g. 0
/guide-b	e.g. 310	e.g. 2
/guide-c	e.g. 95	e.g. 14

COPY THIS PROMPT

Claude

```
Match these CSVs by URL, ignoring tracking parameters.
List the 15 pages with the most classic clicks and few
or no AI impressions or Bing citations. Columns: page,
clicks, AI impressions, citations. Mark URLs found in
only one file. Invent no numbers.
```

3

STEP 3 • MAKE PAGES QUOTABLE

Answer first, then add *checkable facts*

Audit one page, then rewrite one section at a time. Open with a direct answer, keep one idea per paragraph, and mark every missing fact [ADD FACT] so Claude never invents one.

Quotable page checks

- ☒ Direct answer in the first 100 words
- ☒ Claims have a source or date
- ☐ Headings read like questions
- ☐ Last updated date is shown

COPY THIS PROMPT

Claude

Rewrite this section so one paragraph can be lifted out and still make sense. Open with a direct answer. Use only facts I give you; write [ADD FACT: what is needed] where one is missing. Never invent numbers, quotes or reviews. Show before and after.

4

STEP 4 · FIND MISSING ANSWERS

List the questions you are *invisible for*

Give Claude your Search Console queries, Bing grounding queries and customer questions. It clusters them into themes and shows which themes none of your pages answers.

● ● ● Gaps by theme (example data)

Pricing		12
Comparisons		9
Setup help		4

COPY THIS PROMPT

Claude

```
Pick queries written as full questions or comparisons.
Cluster them into themes. For each theme, say if one
of my pages answers it, partly, or not at all. Rank
the 'not at all' themes by how often they appear. Show
the rows you used.
```

5

STEP 5 • SPOT WHO IS NAMED

See who gets named instead *of* *you*

When a rival is cited where you are absent, open that page. Paste both pages into Claude and ask what theirs states clearly that yours does not. Edit from your own facts.

COPY THIS PROMPT

Claude

An AI cited this page instead of mine. Compare both as a reader would. What does theirs state clearly that mine does not: facts, steps, definitions, dates? Give 5 edits as before and after sentences. Do not copy their wording.

6 STEP 6 · GIVE CLAUDE DATA

Feed Claude exports, then *a connector*

Start with CSV exports uploaded to a Claude Project. Add a Drive connector for your tracker if you like. Claude cannot see ChatGPT's answers, so paste them in yourself.

● ● ● Search Console export

Open the Performance report

Choose the Pages tab

Press Export

Upload the file to your Claude Project

COPY THIS PROMPT

Claude

```
Using only the uploaded file or connected source, show the 10 pages with the most impressions in the last 28 days. Say which date range you used and where each number came from. Change nothing. If you cannot reach the data, say so.
```

7

STEP 7 • WEEKLY REPORT

Let Claude write the *Monday report*

Every Monday, run your questions, export the files and upload them. Claude writes one page: what changed, what to edit next, and what the data cannot show. Trust trends, not single answers.

Monday routine

- ☒ Run 10 questions (20 min)
- ☒ Export Search Console and Bing (5 min)
- ☐ Upload to the Project (2 min)
- ☐ Ask for the report (5 min)

COPY THIS PROMPT

Claude

```
Write my weekly AI-visibility report from the files in this Project. One page: three lines on what changed with evidence, a table of question, last week, this week, three actions, and caveats. A missing number means 'no data'.
```

Get the *full guide*

Setup step by step, all 11 prompts and the honest limits.
