AI x Marketing

Your website URL is now *an ad brief*

Google, X and Meta now draft
ads from what you already have

URL in, *ads* out

01 · Google

URLs and photos into video

Google says Asset Studio, powered by **Gemini Omni**, turns your website URLs and photos into videos you can preview before publishing. For Demand Gen and YouTube ads.

02 · X

X Lift builds the whole campaign

Enter your URL. X's AI offers images and copy, and can build the campaign, **targeting included**. You set the budget. It's aimed at new advertisers.

03 • Meta

Static ads become video

Advantage+ creative now generates video from static assets, **generally available**. Ads Creative Studio can change hooks, audio, clip length, captions and end scenes.

Who X Lift is for

50%

growth in X's active self-serve advertisers

Q3 2026 vs Q3 2025, as reported by X. Smaller, newer advertisers are the target.

Source: Social Media Today, 6 Oct 2026

04 · Fix the page first

The AI reads your landing page

Put the offer, the price and the proof near the top. A vague page gives you **a vague ad**, just faster.

05 · Keep a control

AI draft vs your best ad

Same budget, same audience, one variable. Google's own advice: change gradually and judge **quality over quantity**, so the system has time to measure.

06 · Check before it goes live

- 01 Every claim is true
- 02 Price matches the page
- 03 No made-up reviews or stats
- 04 Still sounds like you

The catch

Keep a human on spend

X Lift can set targeting for you. Meta is adding budget changes **by prompt**. Let AI draft the options. You decide what's true and worth the money.
