# Stop *switching tabs*. Connect your tools inside ChatGPT

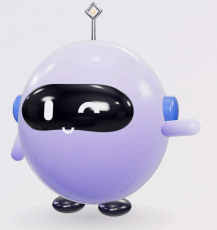

Add verified apps in minutes and  
pull live data straight into chat

Click to integrate apps

01 · Ensure you have ChatGPT Plus

## Developer Mode requires Plus

Developer Mode, needed for MCP servers, is only available on Plus, Pro, Team, Enterprise and Edu plans. Free plans cannot use MCP servers. The Plus plan starts at \$20 per month.

02 · [Open Settings](#) → [Apps](#)

## Find the Apps marketplace

In ChatGPT click your name, choose Settings, then select Apps. This opens the marketplace where you can search for verified connectors.

03 · Add Adspirer

## Connect multi-platform ad management

Search for Adspirer, click Connect and authorise your Google, Meta, Amazon, ChatGPT Ads, LinkedIn and TikTok accounts. Adspirer has been an official listing since May 29 2026 and connects to over 400 tools across six platforms. Since June 2026 it returns interactive in-chat dashboards with tabbed Overview, Campaigns and Insights views.

04 · Add HubSpot plugin

## Enable CRM access

The HubSpot plugin lets you read contact lists, deal stages and trigger workflows using natural language. It works across claude.ai, Claude Desktop and other ChatGPT surfaces, giving you live CRM data without leaving the chat.

05 · Add Zapier plugin

## Build automations by description

With the Zapier plugin you describe an automation, for example “When a new lead arrives in HubSpot, add a row to Google Sheets”, and Zapier builds it inside the chat. You can then run or edit the workflow by conversation.

06 · Test with a live data prompt

## See real numbers in chat

Try a prompt such as “Show me my worst performing campaigns this month” to see real numbers from your ad accounts. The answer appears as an interactive dashboard you can filter by date range.
